

Human IgG1 Isotype Control - Extremely Low Endotoxin

Product Code: ICH2254EL

More Information

Concentration: 1.0 - 5.0 mg/ml

Isotype: Human IgG1

Host: CHO

product name H2: Human IgG1 Isotype Control - Extremely Low Endotoxin

Aggregation: Aggregation level \leq 5%

Buffer: ICH3002

Shipping Conditions: Blue ice

background: This human IgG1 isotype-control antibody is offered in an extremely low-endotoxin format, providing a matched, non-specific reference for experiments employing human IgG1 antibodies. Validated for flow cytometry and functional assays, it helps establish background signal, set negative gating, and serve as a control arm. The antibody is suitable for in vivo use and manufactured in scalable milligram to gram quantities to meet the demands of bulk and high-throughput laboratories. It is a non-therapeutic reagent intended strictly for research use only, delivering reproducible, lot-consistent control performance across immunology applications.

Purification Method: This monoclonal antibody was purified using multi-step affinity chromatography methods such as Protein A or G depending on the species and isotype.

Formulation: This monoclonal antibody is aseptically packaged and formulated in 0.01 M phosphate buffered saline (150 mM NaCl) PBS pH 7.2 - 7.4 with no carrier protein, potassium, calcium or preservatives added.

Purity: >95% by SDS-PAGE

Endotoxin: 0.05 EU/mg as determined by the LAL method

Storage: This antibody is stable for at least one week when stored sterile at 2-8°C. For long term storage aseptically aliquot in working volumes without diluting and store at -80°C. Avoid Repeated Freeze Thaw Cycles.

Applications: Flow Cytometry, Functional Assays

Application Notes: Each investigator should determine their own optimal working dilution for specific applications.

Use: Products are for research use only. Not for use in diagnostic or therapeutic procedures.
