

Mouse CD16a-2 Protein (In Vivo Grade, Ultra-Low Endotoxin)

Product Code: ICH3028

More Information

Species Reactivity: Mouse

Target: Mouse CD16a-2 Protein

Host: Human embryonic kidney (HEK) 293 cells

product name H2: Mouse CD16a-2 Protein (In Vivo Grade, Ultra-Low Endotoxin)

UniProt: A0A0B4J1G0

Shipping Conditions: Ambient

background: Mouse CD16a-2 (FcγRIV) is a distinct activating Fc gamma receptor on murine myeloid cells with selective IgG-subclass binding, making it a key player in mouse models of antibody-mediated effector function. This recombinant mouse CD16a-2 ectodomain is expressed in HEK 293 cells and validated for SPR, BLI and ELISA, enabling precise characterization of subclass-specific Fc engagement. Supplied for research use only in an in vivo grade, ultra-low-endotoxin format, it is produced in scalable milligram (mg) to gram (g) quantities. Bulk and high-throughput laboratories can rely on it for reproducible profiling of this important murine activating Fc receptor.

Other names: CD16-2, FCGR4, FCGRIV, FCR4, FCRIV, IGFR4, IGFRIV

Specificity: The sequence of the extracellular domain of mouse CD16-2 (Gly 21-Gln 203) was fused with a C-terminal tag consisting of the AVI tag, TEV protease recognition sequence and a 10-His tag.

Formulation: Lyophilized from sterile PBS, pH 7.4. No preservatives or cryoprotectants have been added. To obtain a final concentration of 1 mg/ml reconstitute 0.25 mg vials with 0.25 ml water and 1.0 mg vials with 1.0 ml water.

Purity: >95% monomer purity as determined by SDS-PAGE and SEC-HPLC.

Endotoxin: 1.0 EU per mg as determined by the LAL method.

Storage: Lyophilized proteins are stable at ambient temperature for at least 2 weeks. If the protein is not to be used immediately then the protein should be stored in lyophilized form at -20 °C for up to 12 months. Once the protein has been reconstituted we recommend

Applications: SPR, BLI, ELISA

Use: Products are for research use only. Not for use in diagnostic or therapeutic procedures.
